## THE WORLD

**SHAPE AND SIZE OF THE EARTH:** The earth is very nearly an oblate spheroid, whose shorter axis coincides with its axis of rotation passing through the two poles.

According to Colonel Clarke's calculations, its major axis measures 41,852,124 feet, or 7,926.5 statute miles; its minor axis 41,710,242 feet, or 7,809.5 statute miles; its circumference along the Equator measures 24,902 statute miles, or 21,600 geographical miles; its total area 196,940,000 statute square miles; and its volume 259,880 million cubic miles.

Of this total area, 84 p. c. (144,704,000 sq. m.) are within the Arctic and Antarctic regions; 51.6 p. c. (102,244,654 sq. m.) within the two temperate regions; 0 p. c. (78,231,046 sq. m.) within the Tropics.

**THE LAND:** The land covers 54,807,420 sq. m., on the assumption that 250,000 sq. m. of land remain to be discovered within the Arctic Regions, and that the supposed Antarctic continent, or "Antarctica," has an extent of 2,500,000 sq. m. within the Antarctic Circle.

**THE OCEANS:** The oceans, including the inland seas connected with them, cover 142,132,980 sq. m., or 72 p. c. of the total surface of the earth. There are 2.59 sq. m. of ocean to every sq. m. of land. This area is distributed over the different areas as follows: Arctic Ocean, including Hudson Bay, 5,785,000 sq. m.; Atlantic Ocean, 34,301,400 sq. m.; Indian Ocean, 28,615,600 sq. m.; Pacific Ocean, 67,639,630 sq. m.; Antarctic Ocean, 5,731,350 sq. m.

**HEIGHTS AND DEPTHS:** The mean height of the land has been estimated at 2,440 feet; the mean depth of the sea 1,470 feet (Karslans). The highest mountain (Mt. Everest) rises to a height of 29,000 feet; the greatest depth of the ocean as yet discovered (in the Pacific, between Guam and Midway) is 31,614 feet. If the whole of the solid crust of the earth were to be levelled, so as to form a spheroid, it would still be covered by an ocean of a uniform depth of 8,000 feet (Prof. Penck).

## MAP OF THE WORLD ON THE EQUIVALENT PROJECTION

### EXPLANATORY NOTE

This new map presents a comprehensive view of the superficial area of the earth, not unlike that which would be displayed by the printed cover of a globe, if removed and flattened.

On this map all areas appear in their true proportion. For example, Greenland, which, on Mercator's Projection, seems to be larger than South America, here is shown in its relative proportion of size to that continent, having less than one-eighth of the latter's area. In fact, this is the only projection in which are shown the equivalent areas, or correct sizes, of all parts of the globe, in their proper relative position.

The meridians are placed fifteen degrees apart, and, since this interval is equal to one hour of time, meridians and intervals make a standard time-map for the whole earth.

Submarine Cables, shown in fine black lines.

The International Date Line, as agreed upon by leading nations, shown in heavy broken lines.

Colonial possessions of European powers in Africa, Asia and Oceania, shown in colors corresponding with those used for mother countries.
